

## Selecting the Right Vacuum for the Right Job

---

Some cleaning jobs require a special kind of vacuum. And with so many options to consider - weight, motor, ergonomics, cleaning width, bagged or bagless selecting the right tool for the job can be difficult. Below, the commercial cleaning experts at Parish-Supply analyze the various types of cleaning challenges and the vacuums that are frequently designated to tackle the job:

### Team Cleaning

For this method that assigns one team member to a specific cleaning task - vacuuming, restroom cleaning, light-duty work - lightweight backpack vacuums are a go-to tool. Most models, such as the **Speedster 600/1000**, offer unique features that help maintain a proper body position, improve user comfort without affecting productivity and are found to be an effective tool for maintaining a healthy level of indoor air quality. With a CRI Seal of Approval, the versatile Speedster is well-equipped with an assortment of attachments for multi-surface cleaning.

### Detail Cleaning

Canister vacuums make it easy to detail clean hard-to-reach areas like corners, crevices and stairs. Compact and lightweight in design, models like the Ultra Quiet **Nace PSP 200** canister are often equipped with a stainless steel wand, complete set of attachments and longer cord, allowing for easier access to a wide range of cleaning areas.

### Zone Cleaning

Zone cleaning is the method in which each employee is responsible for every cleaning task in a given area, and upright vacuums are the most versatile tool to attack zone cleaning. Choose one with dual motor power and a wide cleaning path - like the **Tornado CV 30/38** - to get the job done fast. Outfitted with a 12-15 inch cleaning path, 50-foot cord and convenient attachments, the CV series vacuum cleaner is durable, versatile, easy-to-use and a breeze to maintain.

### Hospitality Cleaning

Another method that calls for detail cleaning, hospitality cleaning calls for an extremely lightweight upright or canister vacuum. Built for powerful cleaning in a lightweight design, **Tornado CK 13/1** upright model weighs only 8 pounds, offers easy maneuverability and has the CRI Seal of Approval.

### Day Cleaning

Quieter, commercial-strength upright vacuums are best suited for day cleaning, a routine that studies show can cost 15 to 25 percent less than cleaning at night. Use a quieter upright that offers superior filtration and is built to withstand daily, heavy use so staff can clean around the clock with less interruption to workers. Known for quality and durability, Tornado offers many of the quietest vacuums available, many uprights that operate below 70 dBs, the limit to meet L.E.E.D. requirements.

### Productivity

In today's economy, no matter what the job is, everyone needs to cut costs and increase productivity. Parish-Supply offers a versatile selection of durable, low-maintenance and powerful vacuums that are designed to fit the most specific of cleaning operations.
