

# Solutions for Tough Situations

We've identified solutions below for some of the common window cleaning challenges you'll encounter.

## Situation:

Odd - shaped windows

## Solution:

The **Swivel Loc Squeegee** adjusts to several positions enabling you to clean right up to the curved edge or width of the glass.

## Situation:

Inaccessible windows or deep ledges

## Solution:

Use the **Swivel Loc Washer** to scrub and then the **Swivel Loc Squeegee** to clean your windows. Both tools adjust quickly and easily to several positions enabling you to clean right up to the mouldings.

# Professional Results

To deliver the professional results your customers expect, you need the right assortment of high quality window cleaning tools. Save time and money by using the complete Window Cleaning System.

Your Window Cleaning System should include:

## WASHER-SCRUBBER

Easily and quickly wash windows with minimal effort.

## SQUEEGEE

Quickly remove liquid completely - leaves behind no lint!

## SOAP

Breaks down dirt, smoke and grime for easy removal. Provides superior glide.

## POLE

Clean safely from the ground - eliminate dangerous ladders. Tools easily attach to the pole.

## BUCKET

Should accommodate the length of your scrubber.

**1** Place the washer on the pole and wet the upper part of the window horizontally along the top. Then scrub using up and down strokes.

**2** Place the squeegee in the upper right hand corner, against the top moulding. (Opposite corner if left handed)

**3** Tilt the right edge of the squeegee down slightly and start your downward stroke.

**4** Maintaining the squeegee in the tilted position, pull the squeegee down to shoulder height

**5** At the bottom of each stroke, tap the squeegee against the remaining wet portion of the glass.

**6** Tilt the squeegee toward the remaining wet portion. This prevents dripping on the cleaned area.

**7** Working along the entire window top, pull the squeegee down in a slightly diagonal direction.

**8** On the last down stroke, place the squeegee against the left-hand moulding. Tilt the handle slightly toward the bottom and pull down.

**9** Hold the squeegee loosely and position the tool against the left vertical moulding, overlapping into the dry portion of the window.

**10** Tilt the squeegee down slightly and pull across the width of the window.

**11** Tilt handle down slightly and squeegee across the window with the end of the squeegee rubber touching the moulding.

**12** As the squeegee nears the moulding, turn blade, so the right edge touches the vertical moulding and complete the stroke against the bottom of the window.
